

Outdoor Clock with Temperature and Humidity

1 Remove the Weather-Resistant Cover

Access the battery compartment by pulling off the weather-resistant cover. Be careful not to damage the cover during removal.

2 Set the Time

Turn the set knob on the back of the clock in either direction.

3 Install or Replace Batteries

AcuRite recommends high quality alkaline or lithium batteries for the best product performance. Heavy duty or rechargeable batteries are not recommended.

The clock requires lithium batteries in low temperature conditions. Cold temperatures can cause alkaline batteries to function improperly. Use lithium batteries in the clock for temperatures below -4°F / -20°C .

Insert 1 x AA alkaline or lithium battery into the battery compartment.

IMPORTANT: Follow the polarity (+/-) diagram in the battery compartment.

4 Calibrate the Temperature and Humidity

The thermometer and hygrometer instruments have been calibrated at the factory and should not need adjustment. However, as with all instruments that are placed in a new location, you should always allow a period of several hours for stabilization before determining whether it is reading accurately. Should you determine that an adjustment of the thermometer or hygrometer is needed, this can be achieved by gently rotating the back of the thermometer or hygrometer movement on the back of the unit slowly in either direction until the correct reading is shown on the dial.

DO NOT HANG IN DIRECT SUNLIGHT!

For the most accurate temperature readings choose a location that will not be exposed to direct sunlight or other direct heat sources.
